

# skeye multicoat

Skeye Multicoat combines outstanding anti-reflective performance with greater protection against dirt, scratches and moisture.

Delivering a combination of toughness, clarity and easy cleaning, Skeye Multicoat is unequalled by any other anti-reflection lens coating.

## LENSES WITHOUT SKEYE MC

## LENSES WITH SKEYE MC

Outstanding Vision.

Always look your best.

### Clearer Vision.

Skeye Multicoat **increases light transmission by at least 7%**, providing the wearer with crisper and clearer vision. This is achieved by reducing front, internal and back surface reflections. This allows almost all available light to pass through the lens and enter the eye for outstanding vision results.

### Cosmetically Enhancing.

Skeye Multicoat enhances the appearance of the patient's glasses by **reducing reflections of light** from the front and back surface of the lens, making them look thinner and more transparent.

### Improved Night Vision.

Skeye Multicoat provides **up to 99% light transmission**, providing the wearer with better vision at night. This is a particular advantage when driving at night, as glare from oncoming head lights is dramatically reduced.

### Easy to Clean.

Skeye Multicoat uses the latest technology to produce an extremely hydrophobic and slippery surface, resolving the age old problem of keeping your lenses clean.

Skeye Multicoat. Available exclusively through Opticare.
